(54) SPEAKER SYSTEM

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a speaker system for hardly transmitting the vibration of a speaker to a box and improving energy transmission efficiency from a cone to air.

SOLUTION: A driver unit 3 is fixed to a stand 1 and a front box 4 and a rear box 5 are directly fixed to the stand 1 with a screw 21 through a cushion 18. Since the box 2 is fixed to the stand 1 and is in contact with the driver unit 3 through the cushion 25 only, sound quality is not lowered by transmitting the sound of the speaker to the box 2. Also, since the attachment of the box 2 is strengthened, a damage during transportation or the like is prevented as well.
